

The state-of-the-art AIRMASTER UKF FRICTION STAR is a masterpiece!. This series sets standards when it comes to performance, diversity and ecology. Equipped with the CIRCO-SYSTEM, smoking has never been so environmentally friendly within such a restricted space.

AIRMASTER UKF FRICTION STAR Compact high-ended smoking facility

With the AIRMASTER UKF FRICTION STAR you will achieve problem free processing whilst maturing, baking, hot smoking, cooking, blanching, hot air cooking. Easy operation is enhanced by minimum tar accumulation, allowing you to extend cleaning intervals and to make far less use of cleaning agents.

Frankfurters. Unbelievable

AIRMASTER UKF FRICTION STAR.
A revolution is happening behind this door.

We have learned.

People who purchase a smoking system today want to know whether it can be adapted for future applications. Modern production companies operate with a great deal of flexibility, responsibility and foresight.

AIRMASTER UKF FRICTION STAR takes these requirements seriously.

Immediately after the microprocessor gives the command, aromatic natural smoke is silently generated in the desired concentration. The friction unit is fully integrated into the chamber door. A reserve compartment provides space for additional wood when longer smoking times are required.

The programs are fully automatic and safe making the UKF FRICTION STAR usable 24 hours a day.
